NAME

pfb2pfa – convert a type1 pfb file (binary MSDOS) into a pfa (ASCII)

SYNOPSIS

pfb2pfa [-v] pfbfile [pfafile]

DESCRIPTION

Program converts a binary MSDOS representation for a type1 PostScript font into a readable ASCII version. The MSDOS newline (\r) is converted into the UNIX newline (\n). The output is written in a file whose name is the name that is provided on the command line or the basename of the input file plus extension ".pfa".

With the -v option you get some information about what the program is doing.
